

Profile Summary

- Full Stack Developer with 10+ years of diverse experience in software development, encompassing analysis, design, and execution of business applications across various industries.
- Extensive expertise in multiple technologies, including React.js, Angular, Node.js, TypeScript.
- Strong command of Object-Oriented Programming (OOP) principles.
- Proven ability to translate client needs into actionable solutions via strong problem-solving and communication.
- Experience gained from direct interaction with clientele to identify business objectives and establish requirements.
- Transact-SQL certified developer with expertise in designing and implementing database solutions.
- Proficient in database design, query optimization, stored procedures, and SSIS packages.
- Core competencies: full-stack development encompassing client-side applications and REST APIs, performance enhancement and optimization, legacy application modernization, and Agile project management.
- Strong focus on code quality, including unit testing, code reviews, and adherence to coding standards, resulting in improved application reliability and reduced bug occurrences.
- Experienced in automating report generation and data extraction for increased productivity.

Education

Master of Science	Business Analytics and Information Systems	University of South Florida	Dec 2017
Bachelor of Technology	Electronics & Communications Engineering	Koneru Lakshmaiah College of Engineering	Apr 2012

Technical Skills

Frontend	React.js, Angular (8/9/11/15/16/17), TypeScript, JavaScript, ES6+, HTML, CSS, Redux, Next.js, web-sockets, WPF, React Testing Library, Jest
Backend	Node.js, Nest.js, C#, Express.js, TypeORM, Java Spring Boot, Entity Framework 6.0, ASP.NET MVC 5
Database & Services	SQL Server, MongoDB (NoSQL), SQL Server Integration Services (SSIS), MS Access, Oracle SQL
Mobile Development	Xamarin Forms (C#)
Visualization & Reporting	D3.js, SQL Server Reporting Services (SSRS), Tableau, Power BI
Agile/Tools	Visual Studio Code, SQL Server Management Studio, JIRA, Git, npm, yarn, JWT, OAuth, Postman
Cloud Technologies	Azure for code management, AWS (S3, Cloudfront, Lambda, Gateway, EC2, Cloudwatch, IAM), Jenkins, Docker, Cloudbees, Rancher

Certifications:

- DAT201x: Querying Data with Transact- SQL
- Professional SCRUM Master I

Work Experience

Goldman Sachs	Lead Full-stack developer	Jul 2025 – till date
Industry: Banking and Finance		

- **Front-End Development & API Integration:**
 - Built and deployed scalable UI components for the Employee Special Investments project using React.js. The work prioritized state management with Redux and Context API also incorporated memoization for performance.
 - Designed scalable components for handling upload and editor components for a given tax form document.
 - Integrating Datadog Real User Monitoring (RUM) into the enterprise React app by creating a dedicated React context and custom hooks to manage the transmission of user interactions to Datadog. This provided valuable data for analyzing user flow, identifying performance bottlenecks, and informing future UI/UX decisions.
 - Upgraded enterprise applications to the latest version of the company's internal UI toolkit and design system, ensuring full compatibility and a seamless transition across all functional modules reducing technical debt and improving code maintainability.

- Developed technical documentation (skills.md and instructions.md) to guide AI agents in creating new React components that strictly follow the design system's color palette, typography, and naming conventions.
- Collaborated with the UX team to implement responsive designs for mobile, tablet, and desktop viewports, using Figma specifications and a custom useResponsiveness hook.
- **Backend:**
 - Developed and deployed a robust RESTful API using Java Spring Boot, applying best practices such as the Controller-Service-Mapper pattern for clear separation of concerns. Leveraged Lombok annotations for concise code and automated configuration, resulting in faster development cycles and improved code readability.
 - Upgrade existing Spring Boot microservices to Java 21 and containerized services using Docker to facilitate seamless, automated deployments of image and artifacts through internal Conduit pipelines.
 - Coordinated cross-database schema updates between SQL and MongoDB using Alloy Studio to support new features, ensuring data availability in the upstream UI without disrupting ongoing migration efforts or scheduled background jobs.
 - Integrated the API with Kafka to process asynchronous events, enabling real-time decoupling of services and improving system scalability
 - Created a user-defined reusable function in SQL for handling annotations (like fiscal year etc.) in the incoming certification responses for the company's offerings.

Teladoc Health Inc.	Software Engineer III	28 Mar 2022 – Apr 2025
Industry: Health Care		

- **Front-End Development & API Integration:**
 - Delivered scalable and performant UI components for Virtual Care Platform with React + TypeScript, with a focus on state management, and memoization techniques for preventing unnecessary re-renders, conditional rendering, form handling, and adherence to modern front-end architecture principles.
 - Designed and implemented responsive user interfaces using React.js, focusing on usability and accessibility. Applied React Router for client-side routing, enabling smooth navigation between pages without full reloads.
 - Integrated D3.js visualizations within React components, using API calls to fetch real-time data and dynamically update visualizations for data analysis and reporting. Optimized state management for large datasets.
 - Utilized Swagger to create thorough API documentation, ensuring clarity and ease of use for developers.
 - Implemented unit and integration tests for React components using Jest and React Testing Library. Ensured the reliability and stability of key features by testing component behavior, state changes, and API interactions
- **Backend:**
 - Seamlessly integrated the UI with Teladoc API service built on Node.js and Java Spring Boot microservices. Utilize Kafka for asynchronous communication and event stream processing to enhance scalability and user experience.
 - Utilized CI/CD pipelines to automate the build and deployment process of React applications, leveraging Git for source control. The pipeline deployed static assets to AWS S3 and integrated with CloudFront to serve content globally with high availability and low latency.
 - Configured and integrated CloudFront cache invalidation into the deployment workflow, ensuring users always receive the latest version of the site. This optimization improved load times and reduced stale content issues by efficiently managing S3-hosted static assets and CDN edge caching.
 - Utilized AWS API Gateway and Lambda to build and deploy serverless REST APIs, enabling scalable, cost-efficient backend services. API Gateway handled routing, authentication, and rate limiting, while Lambda functions executed business logic and integrated with a MongoDB database.
 - Utilized AWS CloudWatch Logs for real-time monitoring and debugging of deployed services, enabling effective observability, performance tracking, and rapid troubleshooting of production issues.
- **Database Management:**

- Utilized MongoDB and SQL Server for efficient data storage and retrieval, optimizing database performance for application needs and implementing data modeling strategies to improve query response times.
- **Production Support & Environment Management:**
 - Configured and managed Dockerized local development environments, encompassing multiple applications and databases, to streamline development and testing, reducing environment setup time for new developers.
 - Efficiently debugged pre-production environments to identify and resolve issues before deployment, utilizing logging and monitoring tools to ensure application stability and minimize production incidents.
 - Implemented robust error-handling mechanisms and reduced the resolution time of production issues by 30%.
- **Agile Processes & Code Testing:**
 - Contributed to project success by actively participating in Agile methodologies like sprint planning, daily stand-ups, code reviews, retrospectives and promoted collaboration, efficiency, and adherence to best practices.
 - Ensured high code quality through comprehensive testing using React Testing Library, Enzyme, and RSpec, achieving 95% test coverage for critical application features.

DATIS HR Cloud Inc.	Web Application Developer	13 Jan 2020 – 25 Mar 2022
Industry: HR & Payroll		

- **Full-Stack Development for Enterprise Solutions:**
 - Designed and deployed full-stack solutions for Enterprise Payroll and Unified Solutions software (SaaS) using React.js (with hooks, React Router, and Redux) to create dynamic, state-driven front-end applications.
 - Integrated REST APIs and leveraged component lifecycle methods for seamless data management and user interactions, ensuring a smooth and responsive user experience.
 - Developed and maintained front-end components for the specific modules using Angular (versions 6-8), focusing on dynamic data binding, component-based architecture, and integration with REST API for back-end logic.
 - Designed robust and scalable REST APIs with Node.js and Nest.js to handle CRUD operations for benefits and accrual processes, enabling efficient data management and integration with the front-end.
 - Implemented TypeORM to optimize data interactions between Node.js and Microsoft SQL Server, converting complex SQL queries into efficient ORM-based operations, enhancing database performance.
 - Managed codebase using Git, SourceTree ensuring version control and collaborative development practices.
 - Deployed serverless microservices with AWS Lambda and API Gateway, significantly improving scalability, reducing operational overhead, and enhancing cost-efficiency.
 - Enhanced application reliability through comprehensive testing of microservices across multiple environments, ensuring high availability and performance of both front-end and back-end components.
 - Integrated third-party libraries and tools to extend application functionality, providing enhanced user experiences and seamless integration with external services.
- **Legacy Systems & Cloud Support:**
 - Maintained and enhanced existing modules (desktop & web) built on .NET, C#, and SQL demonstrating adaptability and problem-solving skills.
 - Proactively resolved prod errors using AWS CloudWatch, providing on-call support and minimizing service disruptions. Participated in code reviews to ensure code quality, maintainability.

ManTech Enterprises Inc.	Software Developer II	22 Feb 2018 – 31 Dec 2019
Industry: Health Care		

- **Full-Stack Web Development:**
 - Designed, developed, tested, and deployed React web applications for healthcare clients (Medical Equation), adhering to SOLID design principles and common design patterns to ensure a seamless and efficient application.
 - Managed development lifecycle stages including requirements analysis, architecture design, prototyping, dev stack selection, and build configuration collaborating with stakeholders to meet business objectives.

- Developed reusable React components with routing (React Router), state management, and comprehensive error/exception handling, contributing to a robust and user-friendly application.
- Enhanced UI/UX by integrating Bootstrap, CSS, and React-Material UI, ensuring a modern and accessible design, and conducting A/B testing to optimize user flows.
- Refactored existing code to improve maintainability, scalability, and adherence to coding standards and fluent design principles, improving code quality and reducing bug occurrences by 25%.
- Developed RESTful APIs with Node.js to interact with the company's medical interactions and genetic database, enabling efficient data retrieval and manipulation, and implementing API authentication and authorization.
- **Mobile Application Development:**
 - Developed and maintained cross-platform Xamarin Forms mobile applications for over 10,000 users, successfully expanding platform support from iOS to Android to enhance accessibility and performance.
 - Engineered custom notification services, OTA update components, and interactive UI features (video/image filters and hashtags), resulting in a 10% increase in user retention and a 15% boost in engagement.
- **Data and Deployment:**
 - Created SQL Server stored procedures to extract user logs, notifications, and report data for custom report generation, automating report generation and saving the team 10 hours per week.
 - Utilized external npm packages (e.g. pdf-make) to generate reports within the application, providing users with on-demand access to personalized health data.
 - Leveraged AWS S3 buckets for storing user reports and log information, implementing versioning and lifecycle policies to manage data storage efficiently.

Tampa1 Technology Solutions	Technology Specialist Intern	22 May 2017 – 08 Dec 2017
Industry: Construction		

- **Customer Interaction and Application Development:**
 - Collaborated directly with customers to gather feedback and translate their needs into highly efficient and resilient applications, resulting in a 15% improvement in user satisfaction.
 - Utilized C#, Windows Forms, WPF, and SQL skills to design and develop tailored survey order solutions, streamlining the order process and reducing processing time by 10%.
- **Application Support and Web Enhancement:**
 - Provided prod support for client apps built on SQL, and ASP.NET MVC-5, and ensuring smooth operation.
 - Enhanced the company's website functionality and user experience using HTML, CSS, JavaScript, and jQuery.
- **Data Migration and Reporting:**
 - Spearheaded the SQL server migration, ensuring data integrity and minimizing downtime during the transition.
 - Automated the generation of daily, weekly, and monthly reports using SSRS and Power BI, providing key stakeholders with timely insights and reducing manual effort by 20 hours per month.

Tata Consultancy Services	IT Analyst	04 Jun 2012 – 03 Jul 2016
Industry: Retail		

- **Activities performed as Solutions Developer and IT Analyst:**
 - Proactively engaged in all phases of the SDLC to design, develop, and implement .NET-based solutions that precisely met the requirements of retail clients.
 - As a Maintenance & Production Support Analyst, reduced ticket volume by 20% year-over-year by providing effective support and implementing solutions.
 - Enhanced client communication by presenting support metrics and solution outcomes using data visualization tools, including Tableau, Power BI, and SSRS.
 - Utilized a solution-oriented approach to drive multiple delivery process improvements and application enhancements through detailed troubleshooting and root cause analysis.
